REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: (1) The double patenting rejection grounds in view of application 10/366,302 (now US Patent No. 6,875,333) have been withdrawn in view of the fact that the bar-shaped stirrer of the '333 claims was not capable of "form[ing] a liquid-flow channel in the plating solution in an upward flow from the liquid-supply tube/means" as is the required function of the "stirring means" of present claims 12 and 14. (2) Applicant's certified translation of the priority document is sufficient to overcome the 102(e) rejection based on Keigler. It is of further note that an interference should not be declared because the stirring means of the apparatus of Keigler do not cause the plating solution to be in an upward flow. This is evidenced by the claims of Keigler (particularly claim 1) which state that the electrolyte is caused to flow laterally over the workpiece. (3) The "stirring plate" of Nishio et al does not rotate. Thus, it does not "forcibly" stir the plating solution. Hence the plate of Nishio falls outside the scope of the "stirring means" of the present claims. (4) As indicated by Applicant, "stirring means ... for forcibly stirring the plating solution ... to form a liquid-flow channel ... in an upward flow" and "means for stirring the plating solution ... to form a liquid-flow channel in an upward flow" are recited in proper language to invoke 35 USC 112, 6th paragraph. Thus, its scope is interpreted to include the means disclosed in the figures as well as equivalents thereof for forming the upward liquid-flow channel of plating solution.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
